

AECON CIVIL & UTILITIES

Aecon Utilities

HIGHWAY 26 NPS 8" – OWEN SOUND

CLIENT:

Union Gas Limited

ENGINEER:

N/A

CONTRACT VALUE:

\$3.7 million

PROJECT LOCATION:

Owen Sound, ON

CONSTRUCTION PERIOD:

Summer 2005

PROJECT DETAILS:

This project included the installation of 14 km of 8 inch diameter pipeline for natural gas distribution along Highway 26 just east of Owen Sound.

Aecon was also awarded the grading work associated with the Highway 26 reconstruction project put out to tender by the Ministry of Transportation of Ontario. In addition, Aecon's newly formed division, Aecon Utility Engineering, successfully negotiated the right to provide the drafting and layout services on behalf of Union Gas Limited. By securing this engineering work Aecon was able to fast track the pipeline design and minimize delays to the overall reconstruction project caused by the installation of the relocated 8" pipeline along the Highway right-of-way.

Through Aecon completing the drafting / surveying, pipeline installation and Highway reconstruction grading work, the benefits of being a multidisciplinary construction company was truly exemplified. This project provides an excellent example of the kinds of efficiencies and savings that can be realized when a project taps into the multiple services that one organization is able to provide.

This project was completed under the Distribution Pipeline Construction Agreement.
